(54) Title: CIRCUIT ARRANGEMENT FOR OPERATING A HIGH PRESSURE DISCHARGE LAMP

WO 2004/045255 A3

(57) Abstract: A circuit arrangement for operating a high pressure discharge lamp comprising a DC/DC down converter which provided a DC current to an output capacitor (Cout), the output capacitor (Cout) being connected in parallel to a full bridge inverter (S1-S4). The current provided by the DC/DC converter is regulated via a control circuit (CSG) which renders alternatively conductive and non-conductive a switching element (Sd), in dependency of the amplitude of the voltage across the output capacitor (Cout). In particular, a reference signal (Sref) indicative of the DC current to be supplied by the DC/DC converter, is periodically modulated at each commutation of the full bridge inverter (S1-S4) by a microprocessor ( $\mu$ P) in dependency of the peak voltage detected on the output capacitor (Cout) by a peak detector (PD). Consequently, it can be achieved a reduction of resonance phenomena between the output capacitor (Cout) and the component of the full bridge converter such as the ignition choke (Lign) and/or the lamp (LA).

Further documents are listed in the continuation of box C.

Patent family members are listed in annex.

\* Special categories of cited documents :

- \*A\* document defining the general state of the art which is not considered to be of particular relevance
- \*E\* earlier document but published on or after the International filing date
- \*L\* document which may throw doubts on priority claim(s) or which is cited to establish the publication date of another citation or other special reason (as specified)
- \*O\* document referring to an oral disclosure, use, exhibition or other means
- \*P\* document published prior to the International filing date but later than the priority date claimed

\*T\* later document published after the International filing date or priority date and not in conflict with the application but cited to understand the principle or theory underlying the invention

\*X\* document of particular relevance; the claimed invention cannot be considered novel or cannot be considered to involve an inventive step when the document is taken alone

\*Y\* document of particular relevance; the claimed invention cannot be considered to involve an inventive step when the document is combined with one or more other such documents, such combination being obvious to a person skilled in the art.

\*&\* document member of the same patent family
